

Exapath — Business Plan

Tagline Recommendation: *"Build Real. Hire Ready."* (or keep *"The Industry Simulator"* — it's actually powerful)

Parent: BrightLabs Infracsoft **Entity:** Exapath (Ed-tech + Talent-tech hybrid)

The Problem You're Solving

Surface Problem	Root Problem
Students use Cursor, ChatGPT, Bolt to build apps	They don't understand what's happening underneath
Companies get "AI-skilled" resumes	Candidates can't build, debug or scale AI systems
Jobs are being replaced	Not by AI — by people who <i>build</i> AI

Vibe coding created a generation of *AI consumers*, not *AI builders*. Exapath fixes that.

The Core Model — Industry Simulation

What it is:

A **structured, domain-specific program** where participants don't just learn — they *work inside a simulated company environment*, solving real problems using AI tools, frameworks and workflows.

How it works (3-Layer Structure):

Layer 1 — Foundation Track (Weeks 1–4)

- How AI models actually work (LLMs, RAG, Agents, Fine-tuning)
- How vibe coding tools are built (not just used)
- Dev environment, APIs, prompt engineering at a systems level
- Tools: Python, LangChain, OpenAI API, HuggingFace, etc.

Layer 2 — Domain Simulation Track (Weeks 5–10) Participants pick a domain and work on a *live simulation project*:

-  **Fintech** — AI-powered fraud detection, lending automation, robo-advisors
-  **Health Tech** — Clinical AI, diagnostic models, patient data pipelines
-  **Enterprise/ERP** — AI agents for workflow automation (*your BrightLabs strength*)
-  **QA & Testing** — AI-driven software testing agents (*again, BrightLabs strength*)
-  **Retail/E-comm**,  **Logistics**, etc. — expand over time

Layer 3 — Hiring Simulation (Weeks 11–12)

- Mock interviews (technical + system design + AI-specific)
- Portfolio review & project presentation
- Internal placement consideration (BrightLabs roles)
- External placement via partner GCCs, MNCs, Startups

Revenue Model (Dual-Sided)

Side A — Student/Professional Side (B2C)

Offering	Price Range (suggested)
Full Program (3 months)	₹15,000 – ₹35,000
Domain Add-on / Specialisation	₹5,000 – ₹10,000
Job Guarantee variant (ISA model)	% of first 6 months salary
Self-paced online version	₹3,000 – ₹8,000

Side B — Company Side (B2B)

Offering	Model
Talent Pipeline Access — GCCs/MNCs pay to access pre-trained candidates	Subscription or per-hire fee
Custom Domain Simulation — A company sponsors a simulation built around their tech stack	₹5L – ₹25L per cohort
White-label Training — License the simulation model to companies for internal upskilling	Enterprise contract
Hiring Fee	8–12% of first year CTC per placed candidate

💡 **This is your moat** — companies don't just recruit, they *co-design* the simulation. That means ExaPath graduates are pre-trained on their actual problems.

What BrightLabs Infracsoft Enables (Your Unfair Advantage)

Most ed-tech companies *talk* about industry relevance. You can *prove* it:

- Real AI products (ERP, testing tools) = real use cases for simulation
- Your dev team can be mentors and evaluators
- Simulations can be built on actual BrightLabs infrastructure
- Pilot placements can happen *within* BrightLabs itself

This is not just an ed-tech play. It's a talent acquisition engine disguised as an education product.

Go-To-Market Strategy

Phase 1 — Validate (Months 1–3)

- Launch **1 cohort, 1 domain** (suggest: Enterprise AI / ERP — your strongest ground)
- 20–30 students, semi-offline or hybrid (Bengaluru is perfect)
- Run the full 12-week simulation
- Document outcomes obsessively (projects, placements, feedback)

Phase 2 — B2B Activation (Months 4–6)

- Approach **5 GCCs or Startups in Bengaluru** with your cohort outcome data
- Pitch: *"We'll train your next AI hire on your domain. You interview from our top 20%."*
- Sign 2–3 as hiring partners

Phase 3 — Scale (Months 7–12)

- Add 2 more domains
 - Launch online/hybrid version
 - Open second city or go fully remote
 - Build a **company dashboard** — companies track, shortlist and hire directly from ExaPath
-

Brand Positioning

Dimension	Exapath
Category	Industry Simulation Platform
For	Students, Early Professionals, Companies
Unlike	Coursera, Internshala, Masai — who teach skills in isolation
Exapath	Puts you inside a real industry environment before you're hired
Proof	Built by BrightLabs — a company that actually deploys AI at scale

Things to Correct / Watch Out For

1. **Don't go wide too fast** — launching 5 domains at once before proving 1 will dilute quality. Nail one domain first.
2. **Placement promise needs legal clarity** — if you offer job guarantees or ISA, get legal structure right early.
3. **Separate the brands clearly** — BrightLabs is the parent infra company, Exapath is the student/talent-facing brand. Keep them distinct but connected.
4. **Community is a growth flywheel** — build an alumni network from cohort 1. It becomes your proof, your referral engine and your brand.
5. **Pricing for India vs. global** — if you target GCCs, many are open to global cohort hiring. Price accordingly.
